

AGRISPREAD INTERNATIONAL

Founded in 2006, Agri-Spread International is a family run agricultural machinery manufacturer based in Ballyhaunis, Co. Mayo.

Over the years the company has developed an extensive range of agricultural machinery, specialising in trailed fertiliser and lime spreaders. Manure and fertiliser spreading is big business and Agri-Spread International have found themselves exporting over 90% of production to over a dozen countries including the UK, Australia, North America & South Africa.

The company operates from a purpose-built 40,000 square foot factory in Ballyhaunis, which boasts the latest technology for cutting, bending, welding and spraying. The facility has recently undergone an upgrade with the addition of a half a million-euro investment in their shot blasting, paint and oven baking systems to bring the paint quality to the level required for international sales. The production process is split into three well-defined parts, fabrication, painting and then the final assembly, before entering a PDI (Pre Delivery Inspection) area, where the machines are put through their paces before shipping.

Agri-Spread International are an innovative company. Recent developments like Agri-Spread's ISOBUS rate controller for trailed spreaders is now leading the way in trailed spreader applicators. Plans for growth include employing another twelve staff by the end of the year and continuous investment in R&D will ensure that the Agrispread range of spreaders will remain at the forefront of spreading technology over the coming years.

1st fix underway on the Fertiliser spreader assembly line

15 ton Twin Vertical Rear Discharge Spreader inside the factory for a recent factory tour

Agri-Spread International is certainly a company on a mission
